Data source: Files supplied by the Regional Health Authorities to BCCDC reported April 1 - January 04, 2022

Definition: A cluster is defined as 3 or more workers, or workers in combination with patrons, at a workplace with COVID-19, where the medical health officer (MHO) has determined that it is more likely than not that transmission has occurred at the workplace.

Data notes:

NHA

- Includes clusters reported as of April 1, 2021 to January 4, 2022.

FHA

- Data does not include clusters in acute care, long term care facilities, schools, daycares, or correctional facilities
- Includes clusters reported as of April 1, 2021 to January 1, 2022.

VIHA

- Case counts do not include secondary cases
- Includes clusters reported as of April 12, 2021 to January 4, 2022.
- As of December 9, 2021, VIHA is no longer reporting new closures, and all closure information represents closures before this date.

IHA

- Data does not include clusters in long term care facilities, adult/independent living facilities, group homes, schools, or out of IH worksites.
- Patrons are not counted as cases in worksite clusters, with the exception of children from daycare facilities and patrons from fitness facilities.
- Includes clusters reported as of May 1, 2021 to January 4, 2022.
- Since the week of December 26, 2021, surge planning was implemented and COVID CDU began prioritizing cases for public health follow-up - the new cases and worksites in this report are limited to those of high consequence and have a confirmed PCR test. Those that tested positive on Rapid Antigen Test (RAT) only are currently not captured here.

VCH

- Includes clusters reported as of April 1, 2021 to January 4, 2022.
- Data does not include clusters in acute care, LTCF facilities or schools
- Data is obtained from VCH's Case and Contact Tracing Tool (CCT). Cases are linked to 'exposures' in CCT when the case was determined by clinical and contact tracing staff to have :
 1. Visited during their infectious period and potentially transmitted COVID-19 to a non-household contact, AND
 2. Contracted COVID-19 in this location (case has no other known or plausible source of infection)
- Clusters are created by association in time and place. First, cases are sorted by episode date. Episode date is based on the earliest date available between symptom onset date, lab specimen collection date, and reported date. In a single exposure location, the earliest case by episode date is flagged as the 'index' case for each cluster. If another case(s) episode date was associated to the same exposure site within 14 days of the index, they are added to the cluster.
- Cluster start date represents the episode date of the index case, and cluster end date is calculated to be 14 days after the episode date of the last case added to the cluster. Clusters are deemed to have ended if there are no new cases associated with an exposure for 14 days.
- Clusters are defined as having *three or more associated cases with confirmed acquisition*. Staff and patrons/clients are included.

^a The total number of new clusters differs between Table 1 and 2 due to changes in setting types and clusters reported by the HA. "New" reflects clusters that are new since last report or where settings have been updated since the last report.

Data source: Files supplied by the Regional Health Authorities to BCCDC reported April 1 - February 01, 2022

Definition: A cluster is defined as 3 or more workers, or workers in combination with patrons, at a workplace with COVID-19, where the medical health officer (MHO) has determined that it is more likely than not that transmission has occurred at the workplace.

Data notes:

NHA

- Includes clusters reported as of April 1, 2021 to February 1, 2022.

FHA

- Data does not include clusters in acute care, long term care facilities, schools, daycares, or correctional facilities
- Includes clusters reported as of April 1, 2021 to January 1, 2022.

VIHA

- Case counts do not include secondary cases
- Includes clusters reported as of April 12, 2021 to January 4, 2022.
- Closures are reported up until Dec. 9, 2022.

IHA

- Data does not include clusters in long term care facilities, adult/independent living facilities, group homes, schools, or out of IH worksites.
- Patrons are not counted as cases in worksite clusters, with the exception of children from daycare facilities and patrons from fitness facilities.
- Includes clusters reported as of May 1, 2021 to January 19, 2022.

VCH

- Includes clusters reported as of April 1, 2021 to February 2, 2022.
- Data does not include clusters in acute care, LTCF facilities or schools
- Data is obtained from VCH's Case and Contact Tracing Tool (CCT). Cases are linked to 'exposures' in CCT when the case was determined by clinical and contact tracing staff to have :
 1. Visited during their infectious period and potentially transmitted COVID-19 to a non-household contact, AND
 2. Contracted COVID-19 in this location (case has no other known or plausible source of infection)
- Clusters are created by association in time and place. First, cases are sorted by episode date. Episode date is based on the earliest date available between symptom onset date, lab specimen collection date, and reported date. In a single exposure location, the earliest case by episode date is flagged as the 'index' case for each cluster. If another case(s) episode date was associated to the same exposure site within 14 days of the index, they are added to the cluster.
- Cluster start date represents the episode date of the index case, and cluster end date is calculated to be 14 days after the episode date of the last case added to the cluster. Clusters are deemed to have ended if there are no new cases associated with an exposure for 14 days.
- Clusters are defined as having *three or more associated cases with confirmed acquisition*. Staff and patrons/clients are included.
